

MD KAOSER MAHMUD

Senior Software Engineer

Silicon Orchard Limited

+880-1845845486

kaosermahmud.cse@gmail.com

House #32, Road #9, Block #D, Mirpur 1, Dhaka

SKILLS

React

Next.js

PHP

Laravel, Codeigniter

RDBMS

Tailwind, Ant Design

AWARDS & ACHIEVEMENTS

- **2018**
Best student award, BITM (PHP Development training)
- **2019**
Best Software Developer Award, LICT (Web)

EXPERTIES

- Postman (API Testing)
- Figma to pixel perfect UI (React, Next.js, Tailwind, Ant Design)
- Application performance & load optimization.
- RESTful API Development (Laravel, MySQL)
- State Management (Redux, Context API, React Hooks)

ABOUT ME

Full Stack Software Engineer with 4+ years of experience in React, Next.js, PHP, Laravel, Codeigniter and UI design. Skilled in project management, team collaboration, and delivering scalable, user-friendly solutions. Experienced in leading teams, mentoring developers, and ensuring on-time delivery. Passionate about problem-solving, product development, and continuous learning to stay aligned with industry trends.

CAREER SUMMARY

- 2022 – PRESENT
SILICON ORCHARD LIMITED
SENIOR SOFTWARE ENGINEER.

Responsibilities:

- Build and refined web applications based on wireframes, client requirements, and design assets
- Monitored up to 3 junior developers through code/deliverable reviews and feedback, improving performance and product quality.

Project 1: Medicine Delivery System (US-based)

Role: Full Stack Developer

Stack: Laravel, Mysql, React, Next.js, Redux, Context API, Typescript, Tailwind CSS, Ant Design

Details:

- Collaborated with designers to define business models and user flow based on client requirements.
- Proposed and implemented ideas to enhance user experience and support business growth initiatives
- Developed robust APIs using Laravel & MySQL
- Improved overall performance by identifying and resolving 100+ bugs and system bottlenecks.
- Implemented key functionalities including real-time order tracking, in-app chat, and delivery management.
- Upgraded APIs and frontend components based on feedback to improve usability and system scalability

VERSION CONTROL

Project 2: Food Delivery System (US-based)

Role: Frontend Developer

Stack: React, Next.js, Redux, Context API, React Hooks, Typescript, Tailwind CSS, Ant Design

Details:

- Developed intuitive and responsive UI components based on wireframes and design prototypes.
- Integrated Redux and Context API for efficient state management across the application.
- Collaborated with backend developers to implement RESTful API integrations and dynamic data rendering.
- Optimized frontend performance and page load speed to improve user experience.
- Resolved UI/UX bugs and issues based on QA feedback and user reports.

Project 3: Font Detector System

Role: Full Stack Developer

Stack: Next.js, Redux, TypeScript, Tailwind CSS, Ant Design, Laravel, MySQL

Details:

- Collaborated closely with the Machine Learning team to integrate AI-powered font detection algorithms into the platform.
- Built a user-friendly frontend interface using Next.js and Ant Design, enabling users to upload images and retrieve font details instantly.
- Implemented secure, scalable backend APIs in Laravel to process and store font data.
- Utilized Redux for managing application-wide state and TypeScript for improved code maintainability and type safety.
- Developed a results dashboard to display detected fonts and their matching confidence levels.
- Optimized performance for large image processing tasks and ensured smooth user experience with responsive UI components.

Project 4: Employee Management System

Role: Full Stack Developer

Stack: Laravel, MySQL, JavaScript, Ajax, jQuery, Bootstrap, HTML, CSS

Details:

- Designed and developed a role-based employee management portal with CRUD functionalities.
- Implemented dynamic forms, real-time validation, and seamless data interactions using Ajax and jQuery.
- Created secure login, attendance tracking, and payroll calculation features.
- Developed admin dashboard with data visualization and reporting capabilities.
- Ensured responsive design and browser compatibility using Bootstrap and custom CSS.

ASANA

- 2021 –2019

MYSOFTHEAVEN LIMITED

SOFTWARE ENGINEER.

Responsibilities:

- Developed dynamic web applications using Codeigniter and MySQL.
- Designed and implemented responsive UI using Bootstrap, HTML, CSS, and JavaScript.
- Created and consumed RESTful APIs for seamless data exchange between frontend and backend.
- Collaborated with cross-functional teams for requirement gathering, system design, and implementation.
- Designed and developed 20+ business/blog websites for various clients across industries.

Project 1: Bangladesh Scouts (Govt. Project)

Role: Full Stack Developer

Stack: Codeigniter, MySQL, JavaScript, Ajax, jQuery, Bootstrap, HTML, CSS

Details:

- Developed a centralized platform to manage scout registration, training, and event coordination.
- Implemented admin panel with role-based access for managing regional scout offices and data.
- Built reporting tools for generating region-wise membership and activity summaries.
- Ensured scalability and security standards as per government project guidelines.

Project 2: Ecommerce Website

Role: Full Stack Developer

Stack: Codeigniter, MySQL, JavaScript, Ajax, jQuery, Bootstrap, HTML, CSS

Details:

- Developed full-featured e-commerce platform with product catalog, cart, and order management.
- Integrated user authentication, discount coupon system, and order tracking features.
- Created admin dashboard for managing inventory, orders, and customer queries.
- Enhanced UI/UX for a smooth online shopping experience.

Project 3: Hotel Booking System

Role: Full Stack Developer

Stack: Codeigniter, MySQL, JavaScript, Ajax, jQuery, Bootstrap, HTML, CSS

Details:

- Built a hotel room booking platform with real-time availability, search, and reservation features.
- Integrated calendar-based booking and email/SMS confirmation system.
- Ensured mobile responsiveness and cross-browser compatibility.
